

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Management	Create users Confirm each user can be found and impersonated
FR-2	Role Management	Create roles Assign roles to users
FR-3	Table Creation	Create the custom table Add the field whose value controls record access
FR-4	ACL – Read	Create a Read ACL with a script condition Show a record only when the user's role and the field value allow it
FR-5	ACL – Create	Create a Create ACL with a script condition Block record creation for users who are not allowed
FR-6	ACL – Write	Create a Write ACL with a script condition Block edits for users who are not allowed
FR-7	ACL – Delete	Create a Delete ACL with a script condition Block deletion for users who are not allowed
FR-8	Verification and Outcome	Impersonate each user and test Read, Create, Write and Delete Record the results as the project outcome

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Administrators can build the setup by following one milestone at a time, and users see only the records they are allowed to see.
NFR-2	Security	Access is denied unless the user's role and the record's field value allow it. The same check applies to Read, Create, Write and Delete.
NFR-3	Reliability	The same script gives the same result every time for a given role and field value, and each ACL is tested before it is relied on.
NFR-4	Performance	ACL scripts are short and only compare the field value with the user's role, so record lists and forms stay quick to open.
NFR-5	Availability	The solution runs on the ServiceNow cloud instance, so it is available whenever the instance is available.
NFR-6	Scalability	The same ACL pattern can be repeated for other tables, fields and roles without changing the design.
